## Discrete and Computational Geometry, SS 14 Exercise Sheet " 9 ": Well separated pair decomposition University of Bonn, Department of Computer Science I

- Written solutions have to be prepared until Tuesday June 24th, 14:00 pm. There will be a letterbox in the LBH building, close to Room E01.
- You may work in groups of at most two participants.
- Please contact Hilko Delonge, hilko.delonge@uni-bonn.de, if you want to participate and have not yet signed up for one of the exercise groups.
- If you are not yet subscribed to the mailing list, please do so at https://lists.iai.uni-bonn.de/mailman/listinfo.cgi/lc-dcgeom

## Exercise 25: Correctness of FindPairs

Prove that the pairs of sets constructed by the procedure FindPairs do in fact fulfill the WSPD requirement:

$$
\forall p \neq q \in S \quad \exists i\left(p \in A_{i} \text { and } q \in B_{i}\right) \text { or }\left(q \in A_{i} \text { and } p \in B_{i}\right)
$$

## Exercise 26: Construction of WSPD

Construct the WSPD for $s=3$ and the set $S=\{0,4,5,7,12,13,14,16\}$ in $\mathbb{R}^{1}$.

## Exercise 27: Complexity in general

Give an example for a WSPD where $\sum_{i=1}^{n}\left|A_{i}\right|+\left|B_{i}\right|$ is larger than linear in $n$.
